Removal is more or less a reversal of the above. Get the car on blocks, support the engine. Remove carb, alt, all cables, exhaust and intake (for greater clearance), split axles at joints, all bolts from subframe, and lower assembly to floor. Lift body, and pull engine assembly out sideways through wheel arch.

All you need is a bit of chain and a couple of bolts with large washers to keep the chain from slipping off the bolt. One side of the chain on the left rear exhaust manifold stud. Use existing washer and nut. The chain slings over the top of the engine and slide a bolt through the alternator bracket into the chain and put washers in place to keep the chain from sliding off the bolt.
