General Forestry History Silviculture Regeneration

Generally, silviculture is the science and art of growing and cultivating forest crops, based on a knowledge of silvics (the study of the life-history and general characteristics of forest trees and stands, with particular reference to local/regional factors).

Silviculture - Wikipedia

PA Forestry: A short history on Silviculture. When the Europeans first came to Pennsylvania around 90% of the state was covered thick with forest. There are even reports of early explores being claustrophobic due to the heavy covering of the woods. The general perception during the early part of our country's history, with regards to forests, was that land needed to be cleared for agriculture and urban development.

PA Forestry: A short history on Silviculture - Allegheny ...

Silviculture is the art and science of controlling the establishment, growth, composition, health, and quality of forests and woodlands to meet the diverse needs and values of landowners and society such as wildlife habitat, timber, water resources, restoration, and recreation on a sustainable basis. This is accomplished by applying different types of silvicultural treatments such as thinning, harvesting, planting, pruning, prescribed burning and site preparation.
