Wolfsbane is one of our most poisonous plants. 8 All parts of the plant are toxic (the roots are thought to be especially deadly). The culprits are the alkaloids, aconitine, and aconite (names derived from the genus name, Aconitum). Even if you keep your children from putting wolfsbane in their mouths, you're still not out of the woods.

Don't Grow These Poisonous Plants if You Have Children

While the leaves are the most toxic part of the plant, contact with any part (even when the plant is bare of foliage) can cause an allergic reaction. The oil is tenacious; if it gets onto your clothing or pet, you can wind up with a rash long after you leave the woods. Jewelweed is considered a natural remedy for poison ivy rash. Like poison ivy, jewelweed is very common; it is easy to identify jewelweed, once you recognize its cornucopia-shaped flower with a distinct little tail.
