RNA Synthesis Most of the work of

Read Online Rna And Protein Synthesis Chapter Test

making RNA takes place during transcription. In transcription, segments of DNA serve as templates to produce complementary RNA molecules. In prokaryotes, RNA synthesis and protein synthesis takes place in the cytoplasm. In eukaryotes, RNA is produced in the cell's nucleus and then moves to the cytoplasm to play a

turn, direct the expression of genes.

13.1 RNA. The main differences between RNA and DNA are that (1) the sugar in RNA is ribose instead of deoxyribose; (2) RNA is generally single-stranded, not double-stranded; and (3) RNA contains uracil in place of thymine.

Assessment Chapter Test B

The chain of command is from DNA in the nucleus of the cell to RNA to protein synthesis in the cytoplasm. The two main stages are:

- Transcription, the transfer of genetic information of the gene is transcribed into RNA
- Translation, the transfer of information in the RNA

molecule into a protein

DNA & Protein Synthesis

- RNA is the genetic material of some viruses and is necessary in all organisms for protein synthesis to occur. RNA could have been the “original” nucleic acid when life first arose on Earth some 3.8 billion years ago.
- Like DNA, all RNA
